**Sort by:** Title Publication Publication Date Score Binder

**Results 1 - 10 of 10** short listing

- 1** An associative file store using fragments for run-time indexing and compression 57%

R. M. Lea , E. J. Schuegraf  
**Proceedings of the 3rd annual ACM conference on Research and development in information retrieval** June 1980
- 2** A survey of routing techniques for mobile communications networks 26%

S. Ramanathan , Martha Steenstrup  
**Mobile Networks and Applications** October 1996  
 Volume 1 Issue 2  
 Mobile wireless networks pose interesting challenges for routing system design. To produce feasible routes in a mobile wireless network, a routing system must be able to accommodate roving users, changing network topology, and fluctuating link quality. We discuss the impact of node mobility and wireless communication on routing system design, and we survey the set of techniques employed in or proposed for routing in mobile wireless networks.
- 3** Model-driven development of Web applications: the AutoWeb system 17%

Piero Fraternali , Paolo Paolini  
**ACM Transactions on Information Systems (TOIS)** October 2000  
 Volume 18 Issue 4  
 This paper describes a methodology for the development of WWW applications and a tool environment specifically tailored for the methodology. The methodology and the development environment are based upon models and techniques already used in the hypermedia, information systems, and software engineering fields, adapted and blended in an original mix. The foundation of the proposal is the conceptual design of WWW applications, using HDM-lite, a notation for the specification of structure, nav ...

- 4** Reusability and adaptability of interactive resources in Web-based educational systems 13%

Abdulmoteleb El Saddik , Stephan Fischer , Ralf Steinmetz

**Journal on Educational Resources in Computing (JERIC)** March 2001

The production of interactive multimedia content is in most cases an expensive task in terms of time and cost. Hence, optimizing production by exploiting the reusability of interactive multimedia elements is mandatory. Reusability can be triggered by a combination of reusable multimedia components and the appropriate use of metadata to control the components as well as their combination. In this article, we discuss the reusability aspects of interactive multimedia content in web ...

- 5** Tools and approaches for developing data-intensive Web applications: a survey 5%

Piero Fraternali

**ACM Computing Surveys (CSUR)** September 1999

Volume 31 Issue 3

The exponential growth and capillar diffusion of the Web are nurturing a novel generation of applications, characterized by a direct business-to-customer relationship. The development of such applications is a hybrid between traditional IS development and Hypermedia authoring, and challenges the existing tools and approaches for software production. This paper investigates the current situation of Web development tools, both in the commercial and research fields, by identifying and characte ...

- 6** Enabling location-based applications 3%

Chatschik Bisdikian , Jim Christensen , John Davis , Maria R. Ebling , Guernsey Hunt , William Jerome , Hui Lei , Stéphane Maes , Daby Sow

**Proceedings of the 1st international workshop on Mobile commerce** July 2001

We identify a number of factors that may hinder the commercial success of location-based applications: the concern of privacy, the need to consider context beyond location, the presence of voluminous resources, and the constrained interfaces available on mobile devices. We describe an end-to-end system architecture with integrated support to address these issues. In particular, the architecture includes a Secure Context Service that provides broad context information to applications and allow ...

- 7** Broadcast and on-line cultural heritage: Broadcast technologies for disseminating cultural heritage 2%

John Cosmas , Take Itegaki , Kannan Krishnapillai , Alan Lucas , Mohammed Akhtar , Graham Thomas , Jigna Chandaria , Wolfgang Putz , Andre Everts , Michael Probst , Peter Stammnitz , Jens Guether , Wolfram Liebsch , Gerhard Stoll , Christoph Dosch Reiner Socker , Chris Brendes , Ronald Mies , Dick Van Smirren , Benoit Mory , Nicolas Santini , Alan Pearmain , Yakup Paker , Mounia Lalmas , Damien Parwporth , Ekaterina Moutogianni , Gunn Klungsoeyr , Lena Pedersen , Pers-Steinar Hansen , Klaus Illgner  
**Proceedings of the 2001 conference on Virtual reality, archeology, and cultural heritage** November 2001

This paper introduces the System for Advanced Multimedia Broadcast and IT Services (SAMBITS). It consists of a Studio, Server and TV Terminal system for broadcasting audio/video TV content enhanced by 3D graphics, Internet pages, database indexing and sub-image streaming. It describes two scenarios program for disseminating cultural heritage. The readers are invited to imagine how this system could be used to prepare programs for disseminating archaeology. The paper describes the Studio and
